

## Services & Specialties

- **ORTHOPEDICS** – People around the world suffer from pain caused by conditions like arthritis, traumatic injury, and other degenerative disorders related to age or overuse. Treatment options for these conditions can be costly, invasive, and painful. Regeneris Medical can help you choose a different path: Use your own cells to heal your tissue.
- **REGENERATIVE ANTI-AGING** – Regeneris Medical is helping patients ‘wind back the clock’ on signs of aging through use of micronized fat grafting and cellular technology. These therapies can stimulate natural collagen production and tissue regeneration when injected into affected areas, reducing wrinkles, improving skin tone and texture, and giving life to faces that look drawn, tired, and aged.
- **HAIR RESTORATION** – For over a decade, our doctors have been fighting the root causes of hair loss while educating both men and women on how to achieve natural-looking results through both non-surgical and surgical treatments. Our careful balance of science, art and medicine allows us to provide every patient with the best treatment, result, and experience possible.
- **SEXUAL WELLNESS** – For many couples, intimacy is not always enjoyable. Recent studies have shown biocellular therapy to be a viable option for sexual therapy treatments. If you or your partner could use some help in the bedroom, PRP and stem cell therapy might be the answer.
- **NEUROLOGICAL & AUTOIMMUNE CONDITIONS** – Neurological and autoimmune conditions exhibit a wide range of symptoms that can attack joints, muscles, skin, blood, and other types of cells. Traditional treatments may diminish some symptoms, but have not offered a cure. Regenerative technology has the potential to accelerate your body’s natural healing process to help repair damaged tissues.
- **CARDIAC & PULMONARY** – Whether you are a patient with a pre-existing heart or lung condition or are simply looking to improve your health, stem cell therapies offer potential benefit for several cardiac and pulmonary conditions, and is not dependent on the severity of your condition.

## Ready To Get Started?

If you are interested in improving the quality of your life, our doctors at Regeneris Medical are available to explain to you one-on-one how our cellular therapy treatments work, and how they may offer solutions that are unavailable through traditional practices.

Contact us today to learn more about our treatments, the science, and to find out if you are a good candidate for regenerative therapies.

Don't Operate –Regenerate!

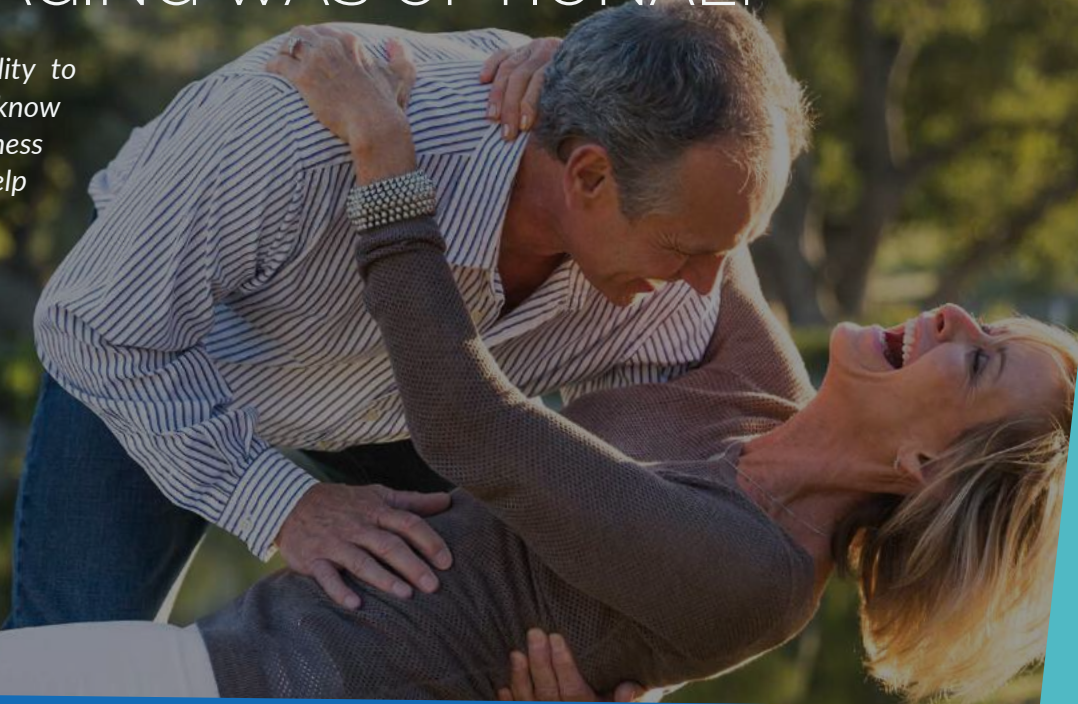

THE FUTURE OF  
HEALTHCARE  
**TODAY**

# WHAT IF AGING WAS OPTIONAL?

*Your body has the ability to heal itself – but did you know that it is possible to harness this healing power to help us live our best life?*

*Regenerative medicine holds the promise to turn back the clocks on injury and age-related conditions. Regeneris Medical is working to deliver this promise – today.*

## HARNESS THE POWER OF YOUR CELLS

*Heal Your Body by Regenerating Your own Tissues*

*Minimally-invasive, Non-surgical procedures*

Since 2009, Regeneris Medical has been a front-runner in the field of regenerative medicine. Through regenerative medicine and outstanding patient-centric service, we see an opportunity to change the face of modern medicine. We're working to create a network of skilled specialists who want to provide their patients with the most advanced care possible.

Driven by our mission to deliver tomorrow's healthcare today, we strive to maintain high standards while always welcoming opportunities to improve the care we provide. We encourage invention and continued learning while staying committed to our patients and the values of transparency, confidentiality, and trust.

## RESEARCH DRIVES US

Clinical Research is the foundation of bringing scientific discovery and innovation to patients. Regeneris Medical is committed to furthering investigation of cellular therapies through collaboration with qualified physicians. Together we are forging the way into a brighter world devoid of surgery and medication, where through regenerative technology your cells heal, repair, and prevent most conditions.

## What is Regenerative Medicine?

Regenerative medicine is a game-changing, evolving area of medicine with the potential to heal damaged tissues and organs as well as repair degenerative conditions and signs of aging. The tools of regenerative medicine include new medications, hormonal and gene therapies, and a better understanding of natural foods and herbs and their effects. Cellular therapies may offer solutions for people with conditions that are currently considered beyond repair, or where the only solution might be expensive and painful surgery.

**How Do Adult Stem Cells Heal?** Adult stem cells remain 'dormant' unless 'activated' by some level of tissue injury. When a person has a degenerative problem, stem cells migrate to that area and stimulate the healing process. These cells can only do this when they are released from the tissue that they originate from (in our case, from adipose fat tissue) and are released to find areas of injury, triggering the primary means of repair of the injection area.

## Our Technology

**SVF** – Stromal Vascular Fraction (SVF) is a state-of-the-art technology where adipose (fat) tissue is processed to yield up to 2000 times the number of adult mesenchymal stem cells (per cc of fat) than can be yielded from other sources of stem cells like bone marrow or blood.

**PRP** – Platelet Rich Plasma (PRP) injections are prepared from the patient's own blood. The activated platelets are injected into the abnormal or damaged tissue, releasing growth factors that increase the proliferation of reparative cells.
